Premium One Power

SLIM \varnothing 3.30

COLLEX ONE CONNECTION

For a symplified prosthetic approach

PREMIUM SLIM POWER: CORONAL MORPHOLOGY

More stable in thin cortical bone

SLIM MORPHOLOGY

High performance core in every bone type, to save grip in reduced space

EASY INSERTION

Thanks to the core/thread ratio, specially studied

Premium One Power

Ø 3.80, Ø 4.25, Ø 5.00

UTM NECK

The surface meant for the interface area between hard and soft tissues

PREMIUM ONE POWER: CORONAL MORPHOLOGY

Excellent performance even in hard cortical bone

REVERSE BUTTRESS THREAD

High cutting capacity and penetration even in hard bone

APICAL NOTCHES

Designed to facilitate insertion and clot decompression

APEX

Tapered, with deeper thread throughout the length, it assures stability mainly in post-extraction cases

Shelta Power

Ø 3.80, Ø 4.25, Ø 5.00

CONNECTION COLLEX ONE
common to all diameters
for a simplified
prosthetic approach

CORONAL MORPHOLOGY
which makes insertion precise
and increases primary stability
in the upper jaw

CONICAL CORE AND CONICAL THREAD
allows excellent
sensitivity during
insertion

THREADING
with progressive thickening to
increase the condensation of
bone poorly mineralised

ROUNDED APEX
perfect for sinus lift

Shelta SL Power

Ø 3.80, Ø 4.25, Ø 5.00

UTM NECK

The surface designed for the interface area between soft tissue and hard tissue

LARGE THREAD AND GROOVES IN THE CORE

for a greater primary stability to increase the contact surface when the bone is less dense

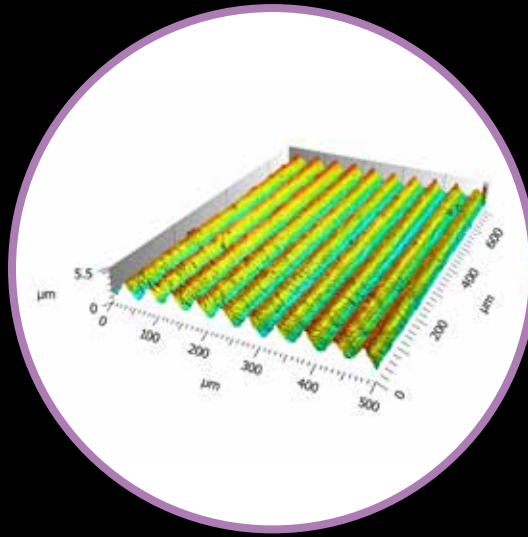

HELICAL APICAL NOTCH

UTM and ZirTi: the synergy between two surfaces

UTM Surface: the substrate

It's not a machined surface, but a regular micro-threading that provides the correct sizing to enhance cellular organization.

Sa: 0.6 µm

ZirTi surface: it's ideal for

The ZirTi surface is obtained with a sandblasting process with zirconium oxide, followed by an acid etching, techniques that contribute to a topography to which the osteoblasts have shown to intimately adapt and to activate rapid proliferation.

Sa: 1.4-1.7 µm

Histology in humans at 3 months: even in bone D4, excellent mineralization is observed in contact with the ZirTi surface.

Image courtesy of Dr. Antonio Rocci and Prof. Marco Gargari.

designed for soft tissues

Arrangement of fibroblasts on UTM surface after 72 hours, observed with fluorescence microscopy - *in vitro* experiment.

The micro-thread on the implant neck provides a guide for the unidirectional movement of cells, with **the biological advantage of faster, organized, and oriented deposition of collagen fibers**. The resulting clinical benefit is a **quicker healing process** long-term maintenance of **healthy and stable tissues** over time.

osseointegration

Enlargements of primary osteoblasts on the ZirTi surface: in images A and B, the **intimate adaptation of a cell on the peaks** that characterize the ZirTi can be observed, thanks to a section obtained with FIB (Focused Ion Beam).

Image courtesy of Prof. Macaluso, University of Parma, Department of Medicine and Surgery - Dentistry Center.

Bibliography on
ZirTi surface.

The advantages of the COLLEX UNIQUE CONNECTION

COLLEX ONE CONNECTION:

several studies have documented its robustness and prosthetic stability compared to other connections without a collar.

Bibliography
on Collex One
connection

INTERNAL HEXAGONAL

connection with a collar of the same size for all diameters.

FOUR DIFFERENT DIAMETERS united by a single connection.

CONTRACONE SEAL:

- Special micromechanical machining that makes both surfaces conical for mutual fitting;
- Peripheral seal limiting bacterial infiltration;
- Documented in literature.

Shelta Power SL \varnothing 5.00 mm
with \varnothing 3.80 mm post

Shelta Power SL \varnothing 5.00 mm
with \varnothing 4.25 mm post

Shelta Power SL \varnothing 5.00 mm
with \varnothing 5.00 mm post

Possibility of prosthetic **PLATFORM SWITCHING** with a abutment of smaller diameter than the implant, or traditional prosthesis, with an abutment of diameter congruent with the connection platform.

The ability to mount components of different diameters on the same platform allows achieving **DIFFERENT MISMATCHING**, to obtain the biological and clinical benefits of platform switching without compromising mechanical strength.

\varnothing implant	3.30 ●	3.80 ●	4.25 ●	5.00 ●
	3.30 ●	3.30 ●	3.30 ●	3.30 ●
\varnothing compatible prosthetic component	-	3.80 ●	3.80 ●	3.80 ●
	-	-	4.25 ●	4.25 ●
	-	-	-	5.00 ●

As demonstrated by the literature, there is a correlation between the extent of Platform Switching (mismatching) and the preservation of marginal bone dimensions: the greater the mismatching, the greater the volumes of hard and soft tissue preserved around the implant.

DIGITAL WORKFLOW

WITH PREMIUM ONE POWER AND SHELTA POWER:
everything you need to save time, enhance treatment
predictability, and boost the productivity of both the
clinic and the laboratory

Guided surgery

ECHOPLAN PRO A

ECHOPLAN PRO S

Complete kits dedicated to guided surgery: the drills with integrated stops allow for time-saving and achieving predictable results. For the detailed content of the guided surgery kits compatible with Premium One Power and Shelta Power, refer to page 25 and following.

DRILLS WITH INTEGRATED STOP

The uniqueness of the Echoplan PRO drills lies in their not requiring attachment to depth stops, as they come with an integrated vertical stop plane within the drills morphology. Additionally, the grooves on the guide body of the drill allow for increased physiological flow inside the preparation and reduce friction between the drill and the guide sleeve. This results in optimized surgical times as well as safe site preparation.

Data acquisition

Capability to acquire the impression at the implant platform or abutment level, even for special prosthetic lines such as Plain B-Space, and XA.

New digital analogs: they allow for a unique and stable repositioning in 3D-printed models, thanks to their integration into CAD libraries.

CAD DESIGN

A wide range of T-Connect options for single and multiple rehabilitations, with cementation cones of different heights and customization, featuring straight and angled screw holes, allow finding the most suitable support for each milled structure. For the details of the T-Connects available for the Collex One connection, refer to page 53 and following.

Ergonomics of Surgical Procedures

The **SURGICAL KITS** are comprehensive, compact, ergonomic, and contain all the necessary tools for the surgery of Premium One Power and Shelta Power implants.

The color codes, also present on the surgical trays, guide the correct sequence of instrument usage.

Both the drills and the stops are characterized by a color code that guides operators in tool selection.

The **SURGICAL TRAYS** are made of **Radel**, a polymer that maintains its characteristics even after numerous cycles of washing and autoclave sterilization.

CYLINDRICAL or **CONICAL DRILLS**, based on different preparations, are supplied complete with depth stops.

The drills are made of **stainless steel** for surgical use and maintain their characteristics unchanged over time and through multiple uses.

The drills are characterized by the presence of clearly visible depth notches.

The drills are **highly sharp, centered, and perform well**. The morphology of the conical drills allows for the collection of valuable bone for regeneration needs.

The kits include a convenient **RATCHET**, which can be used both as a fixed wrench and as a dynamometric wrench for controlling the implant insertion torque and tightening of prosthetic screws.

- The torque can be adjusted from 10 to 70 Ncm;
- The torque adjustment is highly accurate because each individual ratchet is individually calibrated.

Included is a wide range of **PROSTHETIC DRIVERS** for digital use, for the dynamometric ratchet and for micromotor.

The range is suitable for different oral access needs, from extra-short tools to longer instruments for Toronto-type prosthetic rehabilitations.

The slightly tapered coupling between the driver and the screw allows for adequate retention, ensuring secure transport of the screw in the oral cavity.

The surgical procedure involves a countless approach that ensures visibility and ergonomics with the use of the patented **EASY INSERT** drivers:

- it can be easily removed from implant wells even in the presence of high insertion torque;
- the dodecagonal design prevents deformation of the connection edges, ensuring the maintenance of precision and prosthetic stability;
- available in the kit in various configurations, both for use with a micromotor and the ratchet;
- the instruments have a hexagon on the shaft, aligned with the connection hexagon, to facilitate rotational orientation of the fixture.

Premium One Power kit

Complete surgical kit containing all the necessary tools for the insertion of Premium One Power implants (code ZPREMIUM-ONE-INT). All instruments can be purchased individually as spare parts.

Surgical kit for guided surgery with Premium One Power implants

Complete surgical kit containing all the necessary instruments for guided surgery with Premium One Power implants (code ZGS-PRO-A-INT). In the Tray there are a number of instrument slots referring to different systematics. These instruments are therefore not included in the standard kit.

Optional drills for the preparation of implants h 18.00 mm.

For surgical procedures and related warnings, it is recommended to refer to the surgical manual MC-UD-EPLANPROA-E (downloadable from the website www.sweden-martina.com or by scanning the QR CODE next to it).

Optional drills for preparing 7.00 mm high implants can be ordered also cumulatively as a supplementary set with the code GS-PROA-INTEGRA-070.

Depth notches

The laser marking on the cutting edges and the use of stops allow for safe preparation and control of the instrument's insertion depth. The drills always create a hole longer than the desired implant. The oversizing (LS) is equal to the height of the tip of the drill being used.

LL: total length of the working part, including the tip.

LS: length of the overpreparation. This measurement must be calculated in addition to the length of the preparation hole.

The working depth is also identified on bone taps and osteotomes through laser-etched notches, as follows:

Prosthetic solutions of excellence

CONVERGENT PLAIN B-SPACE ABUTMENT FOR MULTIPLE SCREW RETAINED SOLUTIONS

A revolutionary study using synchrotron tomography has demonstrated that the synergy between converging morphology and surface, as opposed to divergent morphologies and non-UTM surfaces, enhances fibroblast adhesion and early activation, facilitating the formation of a biological seal and promoting the integration of peri-implant soft tissues.

Connective fibers appear more interconnected, dense, and stable.

UTM surface along their entire profile.

Image courtesy of Dr. L. Canullo, A. Giuliani, M. Furlani, M. Menini, A. Piattelli, G. Iezzi.

CONICO SYSTEM

Fixed prosthesis without screws and without cement

Easily removable and reinsertable by the clinician

Biological seal and maintenance of healthy and stable tissues over time

For both single and multiple crowns

Not removable by the patient

XA PROSTHESIS

Convergent morphology that provides more space for soft tissues and supports bony peaks.

They are designed for the One-Abutment-One-Time technique and platform switching solutions.

At the base of the posts for cemented solutions and abutments for screw-retained solutions, there are micro-rills that allow for the stabilization of the connective tissue.

Image courtesy of Dr. Xavier Vela

SOLUTIONS FOR ANGLED SCREW HOLE

They are versatile prosthetic solutions that reposition the screw hole palatally to preserve aesthetics.

ORIENTABLE SCREW HOLE ABUTMENT

The castable cannula rotates on the spherical head of the abutment, allowing 360° of angulation. The cannula rotates on the spherical head of the abutment, enabling a 28° angle correction in all directions.

The hexagonal screwdriver with a special design allows for engaging the screw head even in the presence of a pronounced angle and a palatally repositioned screw hole.

ANGLED SCREW HOLE INTERFASE

Angled screw hole Interfases are an ideal solution for digital workflows.

P.A.D.r DISPARALLEL SCREW-RETAINED PROSTHESIS

Easy-to-insert abutments

Maximum freedom and ergonomics for superstructures

Pink anodization for better mimetism

Their compact size makes them suitable for rehabilitation of partially or completely edentulous arches in limited horizontal and vertical spaces.

Specific sleeves are available for luting technique with a standard hole or an angled hole for the palatal repositioning of screw access.

Implant Platforms and Prosthetic Combinations

The connection platforms of Premium One Power and Shelta Power implants are characterized by the presence of an internal hexagon and an external collar that is the same for all diameters, allowing for the selection of the desired abutment size. According to the chosen prosthetic protocol, it is possible to perform prosthetic Platform Switching with a smaller diameter abutment or use an abutment with a congruent diameter to the implant.

∅ implant	3.30 ●	3.80 ●	4.25 ●	5.00 ●
∅ compatible prosthetic component	3.30 ●	3.30* ●	3.30* ●	3.30* ●
	-	3.80 ●	3.80 ●	3.80 ●
	-	-	4.25 ●	4.25 ●
	-	-	-	5.00 ●

Premium One Power ∅ 5.00 mm with post ∅ 3.80 mm

Premium One Power ∅ 5.00 mm with post ∅ 4.25 mm

Premium One Power ∅ 5.00 mm with post ∅ 5.00 mm

Please note

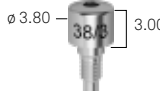

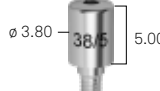

*Prosthetic components of ∅ 3.30 mm result in Platform Switching with implants of ∅ 3.80, 4.25, and 5.00 mm, closing onto the collar instead of the platform (see side image).

It is recommended to use these abutments for single crowns exclusively in the anterior regions (excluding premolars) and in the distal areas for supporting multiple prostheses.

Solutions with angled screw hole

These solutions have a distinctive morphology, featuring a lateral window or an adjustable element that allows for the displacement of the hole for the passing screw to either the palatal or lingual position, thus avoiding unaesthetic vestibular holes.

ø 3.30 ●

ø 3.80 ●

A-AS-330-1

A-AS-380-1

A-AS-330-2

A-AS-380-2

A-AS-330-4

A-AS-380-4

Analog for ball attachments

unique platform

ANAS

Caps for ball attachments

unique platform

polyamide cap

CAP-TFL-1

steel container for polyamide cap external diameter ø 4.80 mm

CONT-CAP-TFL-1

Gr. 5 titanium cap with cap in two parts, retention spring titanium and plastic, plastic mounting ring

CAP-TIT-1

spare plastic ring

AN-CAP-TIT-1

spare steel spring, average hardness

MOL1-CAP-TIT-1

spare steel spring, soft

MOL2-CAP-TIT-1

gold alloy cap, with 3 plastic rings and a tin spacer for the lab

CAP-1

Bars

castable bar, l 5.00 cm, h 3.00 mm, thickness 2.20 mm, ovoid-shaped profile with spacer

BARC-CAV-TIT

divisible bar attachment in titanium for oval bars, h 3.00 mm, thickness 2.20 mm

CAV-TIT

castable bar, l 5.00 cm, ø 2.20 mm

BARC

bar attachment in gold alloy for round bars ø 2.20 mm

CAV-375

Clinical and laboratory prosthetic screws

Standard fixation screws

	VM2-180	
	VM2-180-10	10 pcs packaging

Conical support fixation screws

	L-VMS-180	
	L-VMS-180-10	10 pcs packaging

Fixation screw for angled screw hole

	A-VMA-180	
---	------------------	--

Screws for Pick-up transfer

	VTRA2-180-15	h 15.00
	VTRA2-180-20	h 20.00
	VTRA2-180-MAN	for manual screwing

Screws for closed-tray transfers

	VTRA2-180-10	h 10.00
--	---------------------	---------

Screws for XA technique

	SH-VABU180-200-4	for post h. 4.50 for screw-retained prosthesis
	SH-VABU180-200-5	for post h. 5.50 for screw-retained prosthesis
	SH-VABU180-200-6	for post h. 6.50 for screw-retained prosthesis
	A-PLAIN-VP200	for cemented prosthesis
	L-VMS-180	for cemented prosthesis
	SH-VTRABU-F-200	transfer screw for XA abutment

Recommended torque for tightening prosthetic components

8-10 Ncm	surgical cover screws, healing abutments, transfer screws
20-25 Ncm	prosthetic screws
25-30 Ncm	direct screwing on implants prosthetic components
8-10 Ncm	transfer screws

Warning

Fixation screws are always included in the packaging of each prosthetic component, unless otherwise indicated. Please use laboratory screws for laboratory phases and keep the screw included with the prosthetic component for the final fastening in the patient's mouth.

Screws for P.A.D.r. abutments

	PADR-VM-180	for P.A.D. abutment
	PADR-VM-180-10	for P.A.D. abutment 10 pcs packaging
	PAD-VTRAL-140	for Pick-up transfer, long
	PAD-VTRA-140	for Pick-up transfer, standard
	PAD-VTRAL-140-MAN	for Pick-up transfer, manual screwing
	PAD-VP-140	for prosthetic components on P.A.D. abutments
	PAD-VP-140-10	for prosthetic components on P.A.D. abutments 10 pcs packaging
	PAD-VPA-140	fixation screw for PADR-TCA-M to use with the dedicated screwdriver DSPDCLH-24 and DSPDCLH-32
	PADR-VTRAL-140-M	carrier for P.A.D.r

Screws for CAD-CAM prosthesis

	A-PLAIN-VP200	for PLAIN abutment
	A-PLAIN-VP200-10	for PLAIN abutment, 10 pcs packaging
	A-PLAIN-VTRA200	for PLAIN abutment Pick-up transfers
	ABU-VMA-200	for angled screw hole

Screws for CAD-CAM prosthesis

	A-CAMTVABU180	for zirconium oxide single crowns and ECHO overstructures
	PAD-VCAM140	for zirconium oxide overstructure on abutment P.A.D.
	CAMPRON205-10	spare ring washers for the head of the screw
	VADIG-180	locking screw for digital analogs
